

# THE HASTINGS CHRONICLE.

A MONG THE MOST IMPORTANT OF

CANADIAN PAIN DESTROYER.

As Family Medicines, it is well said, have

only known, reducing thousands from pain.

Side, Back and Head, Coughs, Cold, Sore

Throats, Sprains, Bruises, Cramps in

the Stomach, Cholera, Malaria, Dys-

ent, Herpes, & Convolusions,

Bites, &c., &c.

THE CANADIAN PAIN DESTROYER has

now been before the public for a long time,

and whenever used, well liked, never failing.

In a single instance, to give permanent relief

when used, we have never known

a single case of failure.

It has been frequently followed, but on the

contrary, all are delighted with its operations.

It is a great remedy in all its virtues and

magical effects.

We speak from experience in a manner that

has tested it thoroughly, and therefore feel

that we can speak from any of the complaints

for which it is recommended, may depend upon

its being a Sovereign Remedy.

The Canadian Pain Destroyer is the

Destroyer in curing the disease for which it is

recommended, as it is wonderful in its effects.

Send the name of the manufacturer, and

the name of the place where it is to be had,

and we will send you a sample.

PRICE—25 Cents per Bottle. All orders

should be addressed to

NORTHRUP & LYMAN,  
Montreal, C. W.

For Sale by—R. Holden & Co., B. C. & Co.,

and M. Sawyer, Belleville, A. D. C. Hawley,

Trenton, G. V. Wilson, Madoc, H. Hod-

Shawville, and by all Medicinal Dealers.

# THE HASTINGS CHRONICLE.

FROST, THE SCIENTIFIC SHOE-MAKER.

A Vermont paper gives the following remarkable account of a shoemaker, who has attained to eminence in the science of shoe-making by the study of Books and other difficulties. Being ill and weak, he needed to take walks, and in these gathered the flowers which attracted his attention. We quote the rest of the account:—

"He soon obtained an elementary work on botany, and before the frost of winter came to cut down the remaining flowers. Next summer he began to grow them, giving its proper name and place, and what was more, he had, in a great measure, regained his health, and obtained a valuable knowledge of botany. With the return of spring, he obtained the previous year, he prompted him to read more, and in the field of botany he was surprised at the great variety of plants that had previously escaped his observation. He soon found plants not described as indigenous to Vermont, and subsequently discovered them not described in any American book. This somewhat embarrassed him, but when he had submitted them to his contemporaries, they gave him credit for discovering new species, the inward satisfaction that ever glows in the heart of a naturalist when conscious of having contributed one new truth to science, awakened in his mind pleasant emotions, gave him strength, and made him more zealous in his search for botany.

"His examinations were not restricted to the field of ordinary botany, but extended to the study of mosses, lichens, and fungi. He made collections of these, but when he attempted to determine their species, he found no American book which had been made to suit his purpose. In his studies he had been referred to works on plants," *Frisea Systema Mycologiae*, "Albertini & Schultes' *On special Fungorum*," "Aethomus' *Botanica quae omnes delicias Lichenis* et aliis, and, hoping to get new light from them, sent to Europe and procured some of those which he supposed might be of service. He was greatly pleased with the results of his efforts to find out the names of these plants, which were all written in Latin! In order that they might become available to him he must learn the Latin language. At the age of forty-five most men would have considered this too great a task to commence, but he desirous to know the contents of those dear books was a sufficient incentive in itself to induce the undaunted youth, which was soon no longer a boy, to learn the Latin language. A knowledge of the Latin aided him so much that he soon commenced the study of Greek, and became acquainted with it to understand generally the meaning of words derived from that language, especially the generic names found in scientific works.

"As he continued his researches, he again felt the lack of books for reference, and determined to send to Europe again for others, among which was wanted 'Rabenhorst's *Deutschland Kryptogamia Florae*,' and 'Nees ab Esenbeck's *Das System der Fäule und Schwämme*'—and notwithstanding he feared the contents might not be in Latin or English be ordered them. The books arrived written in the German language. Again he applied himself to learn the German language, and again he was victorious, and amply repaid for his mental efforts.

"In collecting specimens of fungi, mosses, and flowers, he came in contact with insects which arrested his attention, and after having studied their history in such works on entomology as he could find in this country, he again ordered works, among which were 'Skeels' *Orthoptera, &c.* and 'Gibson's Insects,' all of which were written in French!

"This fact did not discourage his researches, he again felt the lack of books for reference, and determined to send to Europe again for others, among which was wanted 'Rabenhorst's *Deutschland Kryptogamia Florae*,' and 'Nees ab Esenbeck's *Das System der Fäule und Schwämme*'—and notwithstanding he feared the contents might not be in Latin or English be ordered them. The books arrived written in the German language. Again he applied himself to learn the German language, and again he was victorious, and amply repaid for his mental efforts.

"Since then, during the past eight years, he has steadily pursued his studies, appropriating at least one hour each day to the pursuit of some scientific treatise; and as the legitimate result, he has become, not only thoroughly informed in all the details of botany, but nearly every branch of natural history. He has made a collection of plants, mosses, fungi, and insects, which is now (privately) classed and named. In consequence with one he becomes greatly interested and encouraged by the result of what he has done, and it was with hope that some might take courage from the example of this remarkable man, that we venture to bring his name before the public, and to some of the prominent circumstances of his eventful life.—Prof. A. D. Hager, Vermon.

THIRTY FENNIAN.—If the bellicose Fenian party that has sprung up in the legions of the 40th and 60th Regiments, the commanders of some of the regiments, and the threatening another immediate invasion of Canada, had had any effect on the British Government, the influence would not have had a tendency to send them from the gallows. Human nature does not grow magnanimous by being threatened, nor do people fear what they have not seen. The Fenians, who are the only thoroughly informed in all the details of the war, among whom were 'Skeels' *Orthoptera, &c.* and 'Gibson's Insects,' all of which were written in French!

"This fact did not discourage the Fenians, who, during the past five years had found, in addition to carrying on an extensive boot and shoe business, to acquire a sufficient knowledge of the Latin and German to study text books in those languages, hence he obtained a French dictionary and grammar, and at the age of fifty commenced the study of a new language, of which he became thoroughly acquainted with it.

"Since then, during the past eight years, he has steadily pursued his studies, appropriating at least one hour each day to the pursuit of some scientific treatise; and as the legitimate result, he has become, not only thoroughly informed in all the details of botany, but nearly every branch of natural history.
